DETAILED ACTION

Allowable Subject Matter

1. **Claims 1-4** are allowed.

As to independent **claim 1**,

Kubota (US 2001/0024181) teaches a liquid crystal display including a table memory for storing compensation signal data corresponding to the combination of a representative gray scale level of the image signal in a current vertical display period and a representative gray scale level of the image signal in a previous vertical display period.

Itakura (US 6,727,877) teaches a liquid crystal display device including a table for storing reference driving voltages, wherein representative gradations for the representative reference driving voltages are set at dispersed intervals.

Lee (US 2003/0179170) teaches a liquid crystal display including a lookup table for storing compensation signal data corresponding to the combination of upper bits of a gray scale level of the image signal in a current vertical display period and upper bits of a gray scale level of the image signal in a previous vertical display period.

None of Kubota, Itakura, and Lee teaches representative gray scale levels of the image signals in a current vertical display period and a previous vertical display period included in a table memory of a liquid crystal display are set at varying intervals.

The failure to include such claim limitations leads to the aspect of the invention disclosed in the claim to be different and distinct over the prior arts.
